

Press release:

## **CREADIS Wind Solutions is a new company in DIS Group**

**Based on over 20 years of experience in the wind industry, DIS Group has founded the company CREADIS Wind Solutions, which will offer unique solutions for the wind industry. The first orders are already being developed.**

DIS Group, which also owns the international knowledge company DIS/CREADIS, has established the company CREADIS Wind Solutions, which develops and sells special solutions for the wind industry.

The company is based on over two decades of experience in delivering technical solutions, projects, and professional expertise to the wind industry, where CREADIS Wind Solutions combines professional advice with solid technical know-how for both offshore and onshore wind turbines.

From day one, CREADIS Wind Solutions has a unique position in the market with a strong staff of industry experts with broad experience and knowledge from both the technological area and the entire value chain. Therefore, the newly formed company is ready to embark on a whole new chapter with a focus on complete product ownership, reduction of Levelized Cost of Energy (LCoE) and development of a more sustainable world for the benefit of future generations.

*- With the creation of CREADIS Wind Solutions, we have established a new chapter in DIS Group with Product Ownership. Our more than 20 years of experience in providing solutions to the wind industry means that we have an enormous amount of knowledge and extensive practical experience. Combined with a large network of customers and suppliers, it forms a strong foundation for the new company, says Kenneth Schmidt, CEO of DIS/CREADIS.*

### **Navigation solution is the first product**

The solutions that CREADIS Wind Solutions will provide to the wind industry will mainly focus on quality, but also on competitiveness, and the first product to be launched is Navigation Aid Solutions (NAS).

NAS is an end-to-end system integration solution for wind turbine owners and operators as well as OEMs that develop both offshore and onshore wind turbines, with NAS acting as an illuminated marker that helps aircrafts and ships spot and navigate around the wind turbines to avoid collisions.

*- With the launch of NAS, we take the next step towards delivering innovative solutions to our customers worldwide – solutions that help reduce Levelized Cost of Energy and let us take responsibility for creating a more sustainable environment for future generations, says Niels Christian Lind-Frandsen, Head of NAS, who also says that the newly founded company has already received the first orders for Navigation Aid Solutions.*
